### Bivariate Data Analysis- Hands on Training

The screenshot shows a Zoom meeting interface. On the left, a grid of participant video feeds is visible, including participants like Dr. Rashid Chaudhary, Abdul Rashid U..., Manju Gupta, and others. On the right, a presentation slide titled 'Regression' is displayed. The slide content includes:

- Regression**
- Coefficient of determination (R square)**
  - The coefficient of determination, denoted  $R^2$  or  $r^2$  and pronounced "R squared", is the proportion of the variance in the dependent variable that is predictable from the independent variable.
  - Ranges from 0 to 1
  - $r^2$  explains the percent of variation; closer to 1, the better the regression line fits the data.
  - Example:  $y = \text{Kilometers per hour} = a + b * \text{Temperature}$  (go ahead to see coefficients)

Below the slide, it says "Online workshop on Bivariate data analysis" and "49 watching now". To the right of the slide, a "Top chat" window shows messages from participants. Further right, another slide titled "Practical Experience" is partially visible, with the text "Move to Tutorials" and a list of bullet points about correlation coefficients ( $r$ ).
